OVERVIEW

Swoop Aero will be conducting operations in South Australia from Q3 2021 (calendar year). These operations will use Remotely Piloted Aircraft Systems (RPAS) flying BVLOS to deliver medical goods.

These operations will take place during, or around, business hours with additional specific stakeholder engagement to be conducted with those areas more directly affected.

In line with CASA approval of these operations, all strategic and tactical deconfliction requirements will be adhered to including the use of NOTAMs, monitoring relevant aviation radio frequencies, and the use of electronic conspicuity devices if/where required.

PROPOSAL

This information is provided to this forum as an additional layer of the Stakeholder Engagement Plan and as an opportunity for members to raise any safety concerns on the information provided or may wish to request more detail.
